A62 A particularly simple and effective dosage is achieved by a movable dosage chamber which acts as a transport device for a predetermined amount of cleaning agent from the storage container to the outlet.

Page 2, please delete the second full paragraph and substitute with the following:

A63 A sensor increases the safety and can be used for controlling the dosing device.

A4 A further protection against undesired feeding of cleaning agent is obtained by a shut-off device.

Page 2, please delete the fourth full paragraph and substitute with the following:

A5 The shut-off device can be actuated by the sensor to increase the safety level still further by an arrangement of the shut-off device in the direction of flow of the cleaning agent.

A6 A particular advantage are design arrangements which are particularly adapted to the dosage of solid cleaning agent in granular form. It has been found that with the dosage wheel described, it is possible to correctly dose and feed safely even strongly hygroscopic granular grains without lumps forming and blockages occurring.

A7 The present development, which can be separated into parts, simplifies cleaning the dosage device without impairing its enclosed properties.
